Define Problem Statements:

Customer Problem Statement:

Finding a suitable rental property is often a time-consuming and challenging process for tenants. They frequently struggle to locate verified properties that match their budget, preferred location, and required amenities. Traditional methods rely heavily on brokers or offline visits, resulting in increased costs, delays, and limited property information.

At the same time, property owners face difficulties in reaching potential tenants efficiently, managing multiple property listings, and handling booking requests manually. The absence of a centralized digital platform makes property management less efficient and increases the possibility of communication gaps between owners and tenants.

To address these challenges, there is a need for a secure, reliable, and user-friendly web application that enables property owners to list and manage rental properties while allowing tenants to search, filter, and book properties conveniently from anywhere. The platform should provide secure authentication, property management features, and an efficient booking system to improve the overall rental experience for both tenants and property owners.

Customer Needs:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan for the property	Married with no co-applicant income.	Self-employed with a good credit history.	Optimistic about loan approval.

- A secure and reliable online rental platform.
- Easy property search based on location, budget, and property type.
- Verified property information with complete details.
- Simple property listing and management for owners.
- Secure user authentication and data protection.
- Quick and transparent booking process.
- Responsive interface accessible from different devices.

Proposed Solution

HouseRent – House Rental Management System is a full-stack MERN web application that provides a centralized platform for property owners and tenants. The application enables owners to manage rental listings while allowing tenants to search, view, and book properties through an intuitive interface. The system incorporates secure JWT-based authentication, efficient property management, advanced search functionality, and a streamlined booking process to simplify rental management.

Example:

Problem Statement (PS)	I am (Customer)	I’m trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan for the property	Married with no co-applicant income.	Self-employed with a good credit history.	Optimistic about loan approval.

01

PROBLEM IDENTIFICATION

Tenants face difficulties finding verified rental properties. Owners struggle to manage listings and reach potential tenants efficiently.

02

IDEA & SOLUTION

Build a platform that connects tenants and property owners, providing easy search, verified listings and seamless booking experience.

03

DEVELOPMENT & TECHNOLOGY

Developed using the MERN stack – MongoDB, Express.js, React.js, and Node.js. Implemented secure authentication and RESTful API.
