Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives—what they Say, Think, Do, and Feel—in relation to the problem your project addresses. This helps the team build a customer-centric solution

SAY • I want to find a safe and affordable rental house. • I need verified property details before booking. • I prefer an easy and secure online booking process.		THINK • Is this property genuine and worth renting? • Can I find a house that fits my budget and location? • Will my personal information be secure?
Tenant (House Seeker)		
DOES • Searches properties by location, price, and property type. • Compares multiple rental properties before choosing. • Books a property and contacts the owner through the platform.		FEELS • Frustrated when suitable houses are difficult to find. • Worried about fake property listings and online fraud. • Happy and confident after finding a verified property and completing a successful booking.
