

Technology Stack

Date	15 March 2026
Team ID	xxxxxx
Project Name	HouseRent – House Rental Management System
Maximum Marks	2 Marks

Define Your Technology Stack:

The HouseRent application is developed using the MERN Stack architecture to provide a scalable, secure, and maintainable web application for property rental management.

Technology Stack Details:

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	React.js, Vite, HTML5, CSS3, Bootstrap, JavaScript (ES6), Axios	Provides a responsive, component-based UI with fast rendering, reusable components, and efficient communication.
2	Backend / Server-Side	Node.js, Express.js	Enables fast, scalable server-side development, RESTful APIs and efficient request handling.
3	Database / Data Storage	MongoDB, Mongoose	Stores property, user, and booking data using a flexible NoSQL document database.
4	Cloud / Hosting / Deployment	Local Development (Future: Render / Vercel / MongoDB Atlas)	Supports application development and deployment with the flexibility to deploy on cloud platforms.
5	Version Control & CI/CD	Git, GitHub	Enables version control, source code collaboration, and project tracking.
6	Third-Party APIs / Other Tools	JWT Authentication, bcrypt.js, Postman	JWT provides secure user authentication, bcrypt.js handles password hashing, and Postman is used for API testing during development.

Additional Development Tools:

- Visual Studio Code
- Git
- GitHub

- Postman
- npm (Node Package Manager)
- MongoDB Compass
